

ERLANG.

**FAULT-TOLERANT, CONCURRENT
PROGRAMMING.**

A BRIEF HISTORY OF ERLANG

PHONE SWITCHES MUST BE ...

HIGHLY CONCURRENT

FAULT-TOLERANT

DISTRIBUTED

(FAST!)

... AND SO IS ERLANG!

ERLANG AS A WHOLE:

- > UNIQUE PROCESS MODEL (ACTORS!)**
- > BUILT-IN FAULT-TOLERANCE & ERROR HANDLING**
 - > DISTRIBUTED PROCESSES**
 - > THREE PARTS!**

PART 1: ERLANG. THE LANGUAGE

- > **FUNCTIONAL**
- > **PROLOG-INSPIRED SYNTAX**
- > **EVERYTHING IS IMMUTABLE**
- > **EXTREME PATTERN-MATCHING**

HELLO JOE

hello_joe.

HELLO JOE

```
-module(hello1).  
-export([hello_joe/0]).
```

```
hello_joe() ->  
    hello_joe.
```

HELLO JOE

```
-module(hello1).  
-export([hello_joe/0]).
```

```
hello_joe() ->  
    hello_joe.
```

```
% 1> c(hello1).  
% {ok,hello1}  
% 2> hello1:hello_joe().  
% hello_joe
```

HELLO JOE

```
-module(hello2).  
-export([hello/1]).
```

```
hello(Name) ->  
    io:format("Hello ~s!~n", [Name]).
```

```
% 3> c(hello2).  
% {ok,hello2}  
% 4> hello2:hello("Joe").  
% Hello Joe!  
% ok
```

**HELLO ~~WORLD~~ JOE IS BORING!
LETS DO IT WITH PROCESSES.**

HELLO SERVER

```
-module(hello_server).
```

```
-export([start_server/0]).
```

```
start_server() ->
```

```
    spawn(fun() -> server() end).
```

```
server() ->
```

```
    receive
```

```
        {greet, Name} ->
```

```
            io:format("Hello ~s!~n", [Name]),
```

```
            server()
```

```
    end.
```

SOME ISSUES WITH THAT ...

- > WHAT ABOUT UNUSED MESSAGES?**
- > WHAT IF THE SERVER CRASHES?**

PART 2: OPEN TELECOM PLATFORM

**IT'S CALLED ERLANG/OTP FOR A
REASON.**

OTP: AN APPLICATION FRAMEWORK

- > SUPERVISION - KEEP PROCESSES ALIVE!**
- > OTP BEHAVIOURS - COMMON PROCESS PATTERNS**
 - > EXTENSIVE STANDARD LIBRARY**
- > ERROR HANDLING, DEBUGGERS, TESTING, ...**
 - > LOTS MORE!**

SUPERVISION

OTP BEHAVIOURS

- › `gen_server`
- › `gen_statem`
- › `gen_event`
- › `supervisor`

gen_server

PART 3: BEAM

**BOGDAN / BJØRN ERLANG ABSTRACT
MACHINE**

A VM FOR ERLANG

- **MANY WERE WRITTEN, BEAM SURVIVED**
- **CONCURRENT GARBAGE-COLLECTION**
- **LOWER-LEVEL BYTECODE THAN JVM**
- **VERY OPEN TO NEW LANGUAGES
(ELIXIR, LFE, JOXA, ...)**

WHAT NEXT?

- **OLE'S TALK, OBVIOUSLY!**
- **LEARN YOU SOME ERLANG!**
WWW.LEARNYOUSOMEERLANG.COM
- **WATCH OUT FOR THE OSLO BEAM MEETUP GROUP**
